

# Public Information Meeting

## Public Dock Expansion Project

May 17, 2018 at 7PM

### PROJECT DESCRIPTION

The proposal is to plan, engineer and construct new public docks at the “Big Boat Dock” (Steamboat Landing) located approximately 1,300 feet south of the Town Park.

### PROJECT COST

The quote for design/fabrication/installation of the dock at the new site is \$89,900. An alternative design calls for the dock spine to be a crib dock. This would increase stability and the overall cost of the dock system. A total of \$38,000 in grant funds has been awarded through the 2017 CFA application through the NYSDOS LWRP grant Program.

### ALTERNATIVE LOCATIONS

Hague Town Park: The location would be off the end of the existing land pier. Due to the Hague Brook delta, there appears to be issues with water depth that may inhibit the success of the docks at this location.

### SCOPE OF WORK

Tasks include: preparation of schematic designs; holding of a public meeting; environmental quality review and assessment; obtaining required permits; design, engineering and construction; construction management and site inspection; and grant administration.

### SCHEDULE

Project Completion: October 2018.
